

# Iridology

## Certification Courses

Iridology I: October 20-22, 2017 9:00 am - 5:00 pm

Iridology II: TBA

### What is Iridology and Sclerology?

*Iridology* is the interpretation of the shapes, colors, and markings of the iris. You can expect to learn more than just the basics, as this class covers information about iris analysis and what to do to help yourself and your clients improve health situations using herbs, flower essences, oils, etc...

*Sclerology* is using the red lines in the eyes to discover "pointers" to our health issues. Sclerology may be used alone, but reveals the most in the hands of an iridologist who knows the genetic constitutional patterns of the iris.

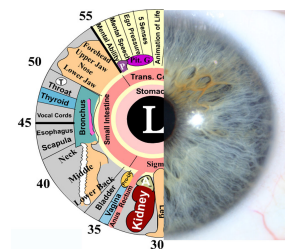

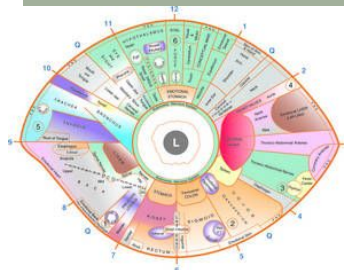

### Why use an iridologist or sclerologist?

- To offer an "inside view" in offsetting future health problems.
- To offer guidance as people take charge of their own health. With iridology, it is possible to show them what their body needs.
- The eye is God's MRI; it enlightens us about a person's health

Classes will be located on the Mississippi Gulf Coast

Class includes a one-year membership in the International Iridology Practitioners' Association. Class consists of 4 days of class and access to online webinars which will be archived for students to view on the website after class.

Cost of courses:  
\$800.00 -2 payment options available.

## Can you see your health?

### What does an Iridologist or Sclerologist do?

A trained iridologist looks into the eye with a light and magnifying glass or camera to chart various lines, colors, spots, or discolorations in your iris and recommends health practices, herbs, nutrition, or exercise to improve the weakened and stressed body systems. It's a perfect companion to all other natural healing methods. This class will include an optional evening review of herbs for iridology.
